Coatings Care & Maintenance

The following is our recommended cleaning procedure for all surfaces coated with our coating systems.

1. Clean coated surfaces carefully with a clean, white cotton cloth, dampened with a mild soap and water solution.
 - A drop of dishwashing soap in a bucket of water is all that is required.
2. Dry the surface with a clean, white cotton cloth.
3. Do not scratch the surface.
4. Do not use cleaning solutions containing ammonia, or any other harmful chemical, as this can discolor and soften the coating.
